Art Unit: 1714

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-19, drawn to conductive polymer compositions, classified in class 524, subclass 495.
- II. Claims 20-24, drawn to voltage application apparatus, classified in class 422, subclass 907.

The inventions are distinct, each from the other because:

Inventions Group I and Group II are related as apparatus and product made.

The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case the apparatus can be used to treat articles other than polymeric articles.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

During a telephone conversation with Mr Meikle on December 17, 2003 a provisional election was made with traverse to prosecute the invention of Group I, claims 1-19. Affirmation of this election must be made by applicant in replying to this Office action. Claims 20-24 are withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.

The following is a quotation of the first paragraph of 35 U.S.C. 112:

Art Unit: 1714

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

Claims 1-19 are rejected under 35 U.S.C. 112, first paragraph, because the specification, while being enabling for polymeric articles subjected to a voltage treatment through contact with electrodes, does not reasonably provide enablement for all possible techniques for subjecting articles to high voltage. The specification does not enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make the invention commensurate in scope with these claims. The instant claims recite only "a voltage application process" without guidance as to how the voltage is applied.
